Professional Summary

Backend Java Developer with nearly 1 year of experience developing scalable backend systems using Java and Spring Boot. Experienced in designing RESTful APIs, optimizing PostgreSQL databases, implementing secure authentication and authorization, and deploying Dockerized applications. Hands-on experience with Redis, AWS S3, and building production-ready backend services.

Technical Skills

Languages: Java, Python, C, C++, JavaScript

Frameworks: Spring Boot

Databases: MySQL, PostgreSQL, Redis

Tools: JUnit, Git, Docker, Postman, AWS S3

Others: Microservices, CI/CD

Experience

Junior Java Developer

Nov 2025 – Present

Restobrain, Darwin, Northern Territory, Australia – Remote

- Developing and enhancing RESTful APIs using Spring Boot for scalable backend services.
- Implemented database indexing and query optimization techniques to improve query execution time and backend performance.
- Diagnosed and resolved production issues across multiple backend modules, improving application stability.
- Technologies:** Java, Spring Boot, PostgreSQL, Docker, Bitbucket, Postman API, JavaScript

Java Intern

Sep 2025 – Nov 2025

Restobrain, Darwin, Northern Territory, Australia – Remote

- Built and integrated REST APIs using Spring Boot.
- Fixed critical bugs, handled edge cases, and improved application stability.
- Optimized queries, refactored backend code, and collaborated on debugging multi-service issues.

Education

Bachelor's in Computer Engineering

2022 – 2026

Purwanchal Engineering Campus, IOE, TU, Dharan, Nepal

Projects

E-commerce Web App

- Developed a scalable e-commerce backend featuring JWT authentication, product management, shopping cart, order lifecycle, Redis caching, PostgreSQL optimization, and RESTful APIs.
- Technologies:** Java, Spring Boot, PostgreSQL, Spring Security, Redis, Docker

Journal Web App

- Developed a secure journal web application with user authentication, role-based authorization, RESTful APIs, scheduled tasks, MongoDB persistence, and Dockerized deployment.
- Technologies:** Java, Spring Boot, MongoDB, SwaggerAPI, Junit, Docker

TrendMorph AI – AI-Powered Content Generation Platform

- Designed an AI pipeline that transforms images into descriptive captions using BLIP and generates engaging social media captions using a fine-tuned T5 model.
- Integrated Speech-to-Text and Text-to-Speech modules for voice-based interaction.
- Deployed the prototype on Hugging Face Spaces with GPU acceleration.
- Technologies:** Python, Transformers, BLIP, T5, Flask, Hugging Face, NLP

Sentiment Analysis Browser Extension

- Developed a browser extension that extracts product reviews from Amazon and Daraz and performs real-time sentiment analysis.
- Trained a TF-IDF + Logistic Regression model to classify reviews into positive, neutral, and negative categories.
- Technologies:** Python, Flask, Scikit-learn, TF-IDF, Logistic Regression
