Professional Summary

Backend Java Developer with hands-on experience building and optimizing RESTful APIs using Spring Boot in a production environment. Proficient in MySQL, PostgreSQL, with a strong focus on clean code, query optimization, and system reliability. Demonstrated ability to debug complex multi-service issues and deliver production-grade improvements.

Technical Skills

Languages: Java, Python, C, C++, JavaScript

Frameworks: Spring Boot

Databases: MySQL, PostgreSQL, MongoDB

DevOps Tools: Docker, Git, Bitbucket

Testing Tools: JUnit, Mockito, Postman

Experience

Junior Java Developer

Dec 2025 – Present

Restobrain, Darwin, Northern Territory, Australia - Remote

- Developing and enhancing RESTful APIs using Spring Boot for scalable backend services.
- Implemented database indexing and query optimization techniques to improve query execution time and backend performance.
- Debugged production issues, contributed to scalable backend modules and collaborated with team members on backend improvements.
- **Tech:** Java, Spring Boot, PostgreSQL, Docker, Bitbucket, Postman API, JavaScript

Java Trainee

Sep 2025 – Dec 2025

Restobrain, Darwin, Northern Territory, Australia - Remote

- Built and integrated REST APIs using Spring Boot.
- Fixed critical bugs, handled edge cases, and improved application stability.
- Optimized queries, refactored backend code, and collaborated on debugging multi-service issues.

Projects

Journal Web App

- A secure journal application built with a Dockerized Spring Boot backend deployed on Render and a React frontend deployed on Vercel.
- JWT-based authentication and role-based access control.
- Scheduled background tasks using CRON jobs.
- Includes MongoDB integration for data persistence and API documentation via Swagger.
- Designed and tested RESTful APIs for reliability using unit tests.
- **Tech:** Java, Spring Boot, MongoDB, SwaggerAPI, Junit, Docker

E-commerce Web App

- Developed an e-commerce web application that features user/seller registration, product management, shopping cart, order processing, and secure authentication with RESTful APIs.
- **Tech:** Java, Spring Boot, MySQL

TrendMorph AI – AI-Powered Content Generation Platform

- Designed and developed a multi-stage AI pipeline that converts images → descriptive captions (BLIP) → social media captions (fine-tuned T5).
- Fine-tuned a T5 transformer model on an Instagram captions dataset to generate context-aware, engaging captions and hashtags.
- Integrated BLIP for image captioning, enabling multi-modal input processing for AI-driven content generation.
- Implemented Speech-to-Text (STT) and Text-to-Speech (TTS) features to support voice-based interaction and audio content accessibility.
- Built RESTful APIs to serve model inference, allowing users to generate captions, hashtags, and voice-assisted content in real time.
- Deployed a prototype using Hugging Face Spaces (GPU) and exposed model functionality via API endpoints.
- **Tech:** Python, Transformers (BLIP, T5), NLP, Speech Processing, Flask, Hugging Face

Sentiment Analysis Browser Extension

- Trained a model in a Sentiment Analysis Browser Extension project, which scrapes product reviews from e-commerce platforms like Amazon and Daraz, providing sentiment insights.
- Trained a Logistic Regression model with TF-IDF to classify reviews into positive, neutral, and negative sentiments.
- Deployed the extension on Firefox for seamless integration with user's browsing experience.
- **Tech:** Python, Flask, NLP, Tf-idf, Logistic Regression, Scikit-learn

Education

Bachelor's in Computer Engineering

2022 – 2026

Purwanchal Engineering Campus, IOE, TU, Dharan, Nepal

Higher Secondary Education (Science)

2020

Kantipur Secondary School, Biratnagar, Morang, Nepal

GPA: 3.69 / 4.0

Secondary Education Examination

2018

Kantipur Secondary School, Biratnagar, Morang, Nepal

GPA: 3.80 / 4.0
